

Resource Generation Limited

ACN 059 950 337

Quarterly Report for the three months ended 31 December 2011

Resource Generation is developing its Boikarabelo coal mine in the Waterberg region of South Africa, which has one of the country's largest remaining coal deposits. The Boikarabelo mine has probable reserves of 744.8 million tonnes of coal on 35% of the tenements under the company's control.

HIGHLIGHTS

- MOU signed with Transnet.
- Boikarabelo mining right update.
- Regulatory approval update.
- Agreement signed to secure water for stage 2 of the mine operations
- Continued strong interest from financiers for debt funding.

SOUTH AFRICA

MOU signed with Transnet

Ledjadja signed a memorandum of understanding (**MOU**) with Transnet Freight Rail (**TFR**) during the quarter. Under the MOU, TFR has agreed to haul Boikarabelo coal on a take or pay basis as follows: 4 million tonnes in the year commencing 1 July 2014, 5 million tonnes in the year commencing 1 July 2015 and 6 million tonnes per annum from 1 July 2016. 50% of the coal will be hauled to export ports and 50% to the Mpumalanga Highveld, which is where Eskom's power stations are located. Freight rates are yet to be determined but will reflect commercially fair and reasonable terms.

Whilst rail capacity currently exists, upgrade works on the existing line between Lephalale and Pyramid South have been identified and need to be completed before coal haulage can commence. Ledjadja has agreed to undertake the upgrade works if TFR agrees. These works are minor and able to be completed prior to the forecast commencement of mining. Ledjadja has also agreed to work with TFR to unlock additional capacity from the Waterberg.

The haulage agreement is conditional upon Boikarabelo commencing to produce coal, the upgrade works being completed and the rail link from Boikarabelo to the existing network being completed. The rail link is part of the capital expenditure of the Boikarabelo mine and ownership and operations of the rail link will be transferred to TFR in due course with compensation to be negotiated. The rail link is intended to be a common user facility. The agreement is also conditional on TFR completing its Waterberg Feasibility Study aimed at unlocking a potential haulage capacity of 22.5 million tonnes per annum from the Waterberg and formal allocation of capacity by TFR.

Ledjadja submitted a draft long term coal haulage agreement based on TFR's standard terms and conditions on 18 November 2011. Communications are occurring and TFR's recent announcements of infrastructure upgrades to expand the Waterberg network have been welcomed.

Mining right update

As previously advised, the appeal that was lodged with the South African Department of Mineral Resources (*DMR*) against the 30 year mining right, does not suspend the mining right, which remains valid. The statutory appeal process is underway and Ledjadja provided its formal response to the DMR in the previous quarter. The DMR's communication of its response to the appellants is awaited. The company is confident that the mining right will be confirmed and is continuing its normal activities to develop the mine.

Regulatory approval update

Ledjadja applied for approval under the National Environmental Management Act (*NEMA*) in January 2011 for construction of the mine infrastructure and the 36 kilometre rail link route from the Boikarabelo mine to the existing Transnet rail line. Public consultation and administrative reviews progressed without any material issues; however minor variations to the application resulted in departmental processes requiring a second environmental impact assessment, which has delayed the expected NEMA approval until early 2012.

The application for an Integrated Water Use Licence (*IWULA*) in December 2010 has also progressed to a mature stage.

Agreement signed to secure water for stage 2 of the mine operations

An agreement was signed during the quarter with the Lephalale Local Municipality (*LLM*) in Limpopo Province which will secure the water required for stage 2 of the company's planned Boikarabelo mine.

Under the contract, which is subject to a number of conditions, the company will construct, operate and maintain a wastewater treatment plant at Marapong, approximately 50 kilometres from Boikarabelo. This will treat municipal effluent and generate up to 16 megalitres of water per day, which will be pumped to the mine site via a new pipeline.

Resource Generation has been working with LLM for two years on plans for the plant, which will provide LLM with essential infrastructure. This is a key responsibility which the company's black empowered subsidiary, Ledjadja Coal (Pty) Limited, committed to undertake as part of its social and labour plan for the Boikarabelo mine.

The key terms of the agreement with LLM are as follows:

- The term is 30 years from the date of grant of the water use licence by the Department of Water Affairs, subject to satisfaction of a number of conditions. The conditions include an environmental impact assessment being approved by relevant government departments by 28 February 2013, sufficient power supply being secured by LMM, and all other required government approvals (including NEMA approval) being obtained by 28 February 2013. An extension of time is possible should delays be experienced.
- Resource Generation will pay for the Marapong wastewater treatment plant upgrade works and expansion works to extend capacity to 4 megalitres per day by January 2014, increasing to 16 megalitres per day by January 2017. It will also construct the Marapong - Boikarabelo effluent transfer pump station and associated works including the transfer pipeline.
- Resource Generation will manage, operate and maintain the treatment plant after the expansion at its own cost until the operations transfer date, which is one year after

completion of the expansion works. At that time LLM will become responsible for management, operation and maintenance of the plant.

- From 1 January 2014, the Boikarabelo mine will be supplied with a minimum of 4 megalitres of treated effluent per day and from 1 January 2017 a maximum of 16 megalitres per day.
- From the operations transfer date, Resource Generation will continue to pay for the operation and maintenance costs. The company will also pay for insurance for the plant for the term of the agreement.

Continued strong interest from financiers for debt funding

Potential debt funders have confirmed their continued strong interest in providing project finance for the development of the Boikarabelo mine. Completion of the financiers' due diligence is subject to satisfactory arrangements with both TFR and Eskom. The company is working toward contractual arrangements with both of these parties.

Drilling activities

Five large diameter core holes were drilled on the Kalkpan property which will be the commencement point for the Boikarabelo open cut mine pit. A sixth hole is due to be completed in February. These large cores are being used to obtain a greater understanding of the coal qualities and washability data of the Boikarabelo coal. This information is necessary to fine tune the design of the coal preparation plant and to add to the information being provided to Eskom to supplement the earlier successful test burn results.

Two core holes were drilled on each of the three Waterberg One Coal properties as part of the requirements for maintenance of the prospecting rights. Results were as expected and do not alter the earlier interpretations of resources and reserves.

CAMEROON

There was no activity during the quarter on Resource Generation's uranium tenements in Cameroon.

Notes

1 The quarterly report provides a basis for informing the market how the entity's activities have been financed for the past quarter and the effect on its cash position. An entity wanting to disclose additional information is encouraged to do so, in a note or notes attached to this report.

2 The "Nature of interest" (items 6.1 and 6.2) includes options in respect of interests in mining tenements acquired, exercised or lapsed during the reporting period. If the entity is involved in a joint venture agreement and there are conditions precedent which will change its percentage interest in a mining tenement, it should disclose the change of percentage interest and conditions precedent in the list required for items 6.1 and 6.2.

3 **Issued and quoted securities** The issue price and amount paid up is not required in items 7.1 and 7.3 for fully paid securities.

4 The definitions in, and provisions of, *AASB 6: Exploration for and Evaluation of Mineral Resources* and *AASB 107: Statement of Cash Flows* apply to this report.

5 **Accounting Standards** ASX will accept, for example, the use of International Financial Reporting Standards for foreign entities. If the standards used do not address a topic, the Australian standard on that topic (if any) must be complied with.
