52 Week High:	A\$ 1.000 (5/11/2009)

Company Statement

The strategy for the Company is to develop high grade “energy” related resources into viable and competitive mining operations. Accelerated shareholder value will be delivered through the delivery of physical mining activity.

The portfolio of resources already accumulated includes low overburden, inexpensive to mine coal deposits in South Africa and Australia as well as potentially very low cost uranium deposits in Cameroon. Exploration programs are currently underway and, in addition in the case of South Africa, mine approval processes to deliver feasible mining options that can ultimately lead to the commencement of cash flow positive mining operations in as short a timeframe as possible.

Positive / Negative

Positive: Strong cash position, big deposit, large output possible.

Negative: Capex for Waterberg estimated around 700M.

Main catalysts for 2010

- Obtaining 70% in the 1B tonnes saleable Waterberg Coal project, if they spend another 2.1M USD
- Maiden resource estimate on its 49% owned Ledjadja coal-project.
- Exploration drilling on its Tasmanian Coal Project.

52 Week Low:	A\$ 0.12 (12/29/2009)
52 Week High:	A\$ 0.34 (1/2/2008)

Company Statement

Citigold Corporation is an Australian gold mining company producing gold from Australia's richest goldfield at Charters Towers in north eastern Australia. Citigold is a growth company that has a growing cash flow from expanding gold mining operations and the huge capital growth upside of an exploration company seeking to define up to 50 million ounces of gold.

Citigold has invested over \$120 million to develop the goldfield, has commenced commercially extracting gold and plans to build up gold production from its underground mines in stages towards 300,000 oz annually by 2013. They hold 100% of the bonanza grade Charters Towers goldfield where a Mineral Resource of 10,000,000 ounces of gold (331 tonnes) at an average grade of 14 g/t gold, to strict JORC reporting standards, has been defined and documented.

Positive / Negative

Positive: Gigantic high-grade deposit (23Mt @14g/t for 10M oz inferred), low cost (Cash costs under 350 AUD/oz anticipated for 2013) and great exploration potential.

Negative: They did not reach the production targets, so it is well possible the 300k oz target won't be met in 2013.

Main catalyst for 2010

- Ramping up production towards 300.000oz/y in 2013
